Introduction. The Philippines has enacted several policies to continually elevate the performance of its governance. As such, the Department of Interior and Local Government (DILG) implemented the Seal of Good Local Government (SGLG) Award to improve the governance performance of the local government units (LGUs). A highly urbanized city in the Province of Negros Occidental is a recipient of this award and other several recognitions. However, lingering issues such as high incidence of malnutrition, lack of access to potable water, excessive flooding due to drainage and sewerage problems, and several concerns in solid waste management implementation triggered questions on the eligibility of these awards. Thus, this study investigated the level of governance performance of selected barangays in the areas of social services, peace and order, disaster management, and environment management when taken as a whole and grouped according to income and population. Also, it sought to find out if a significant difference exists in the level of governance performance of the barangay councils when they are grouped according to mentioned demographics.

Methods. This study used a descriptive-comparative research design to describe and compare the level of governance performance of the top five most and least populated barangays. The respondents were the 114 community leaders selected through stratified random sampling. A properly validated and reliable researcher-made questionnaire based on the assessment criteria of DILG Memorandum Circular No. 2018-194 or the Seal of Good Local Governance for Barangay (SGLGB) was used to gather the evaluation of the respondents. The data gathered were analyzed using Mean, Standard Deviation, and Mann Whitney U test.

Results. Findings showed that the selected barangays have a high level of governance performance in the areas of social service, peace and order, disaster management, and environment management. When grouped according to income and population, the participating barangays have a high level of governance performance except in areas of environment management, which presented that the low income and least populated barangays have an average level of governance performance. Results also showed a significant difference in the level of governance performance in the areas of social service, disaster management, and environment management when grouped according to income and population. In the area of peace and order, the barangays exhibited no significant difference in their level of governance performance when grouped according to income and population.

Conclusion. The selected barangays perform well in the various areas of governance except in the area of environmental management where low-income and least populated barangays still need to improve their services especially on the greening and conservation programs. The results also imply that the HUC has cascaded its support and services to its component barangays, thus, it deserves of all its awards and recognitions. On the other hand, the absence of significant difference in the area of peace and order only shows the consistency of all barangays when it comes to the implementation of the peace and order program. The coordination of the LGU with the Philippine National Police (PNP) is strong and the presence of Bac-Up stations which closely supervise barangays under their jurisdiction proves to be effective. Finally, the results shows adherence to President Duterte’s fight against criminality and illegal drugs and DILG’s advocacy for the Matino, Mahusay at Maasahang barangay.
